

## JOURNAL N°14 — “From model to matter/when reality replies”

(From 1:10 to 1:1 — ALICE Year 1 — (2025))

*“The model suggests. The built structure answers.” — thought of the day*

### MATERIAL

Model: wood, glue, logic, drawing

Reality: wood, bolts, terrain, resistance

Scale: no longer abstract

Error: now structural

Light: present, unexpected

### TOOLS

Cutter → replaced by saw

Pins → replaced by screws

Words → replaced by gestures

Imagination → tested by context

The plan → adapted on-site

*“Between 1:10 and 1:1, the real material is not wood —it’s negotiation.”*

### GESTURE

Sketch . Build . Doubt . Adjust . Lift . Reconnect . Hold.

### REFLECTION

The model gave us confidence. But the structure demanded humility.

What seemed aligned in the studio, cracked on-site. What looked balanced, needed a second beam.

We learned: a structure is not a copy of the model —it is a conversation with gravity.
